

iPECS Cloud Mobile

Free your mobile workers with iPECS Cloud Mobile

iPECS Cloud mobile is a service that connects your mobile workers to iPECS Cloud just like a regular office phone – no messy app required!

What is iPECS Cloud Mobile?

The mobile phone is widely regarded as a tool that users just cannot do without, right? But for most businesses this presents something of a problem when it comes to managing users, voice traffic and compliance. Mobiles generally sit outside of the business communication environment and whilst there is a proliferation of apps available, they all rely upon the user making calls in a way that is not native to their mobile phone – until now! iPECS Cloud mobile delivers iPECS Cloud functionality to the user natively through the mobile SIM. This means that no app is required to initiate calls. Moreover, ALL calls made from the mobile phone are routed via iPECS Cloud ensuring that they can be recorded and reported on just like any other user. It doesn't end there though. iPECS Cloud Mobile users are treated like any other user meaning that calls can be transferred from the mobile to other users with simple codes and the mobile extension can also be part of call groups within iPECS Cloud. So finally, a mobile solution that provides freedom of movement for the mobile user whilst bringing them within the scope of your business communication platform.

Why customers use iPECS Cloud Mobile:

- Deliver the Cloud telephony experience to mobile users without an app
- Control over call traffic and cost as all calls are routed via iPECS Cloud
- Ensure call recording and call analytics are extended to all iPECS Cloud users
